

EMMA ID: 05149

Gene: *CAG-Flpo*

Common name: *CAGGs-Flpo*

Allele: *Tg(CAG-Flpo)1Afst*

Genotyping Information

Genotyping by end-point PCR based on gel is composed of a genespecific short range PCR using primers on wild type allele and a mutant allele-specific short range PCR. The combined results show the genotype of the mice. For example: mutant positive, wild type positive = Heterozygous.

In this case only primers for the mutant-PCR are provided.
