1. Genotyping protocol and data

This section describes the condition used at the Mouse Clinical Institute (ICS) to genotype your **Grhl3** Constitutive Knockout / Conditional Knockout (KO-cKO) project.

1.1. Genotyping strategy

The map below describes the position of the primers used for genotyping for each possible allele.

Sequence of primers used for genotyping:

Position	Primers	Sequence
Ef	3385	GTTAGGTGCCACCGCAGTAGTC
Ef ²	3386	GGGTGATGATGGGATCAGAC
Er	3388	CCACATGCACCTGCACATAC
Kr	3277	CTCCTACATAGTTGGCAGTGTGGG
L3f	3389	CGGGTACATGGCTGCTAAG
L3f ²	3391	GAGGAGAGTGTGGCTGCTCTG
L3r	3390	GAAGCTAGGATGGCCTAAGGG
Lxr	3255	ACTGATGGCGAGCTCAGACCATAAC

PCR fragments expected size (bp):

Region analyzed	Primers used	Position on the primer <i>(see the map above)</i>	Targeted allele (KO allele) (L3)	cKO allele (L2)	KO allele (L-)	WildType allele (WT)
5' part of the selection marker	3385-3277	Ef / Kr	342	---	---	---
Presence of the distal loxP	3389-3390	L3f / L3r	343	343	---	430
Distal loxP specific PCR	3391-3255	L3f ² / Lxr	277	277	---	---
Excision of the selection marker	3386-3388	Ef ² / Er	5828*	421**	---	261
Excision of the floxed exon(s), i.e. knock out	3385-3390	Ef / L3r	6757*	1350*	475**	1277**

*: this PCR product will not be observed using our PCR genotyping conditions (see description below)

**: this PCR is only verified if mice are generated

---: no Amplicon should be obtained

1.2. PCR protocol

This section describes the composition of the mix and cycling conditions used for genotyping.

Reagents:

- FastStart PCR Master (Roche)
- DNA (50ng/ μ l)
- 5' primer (100 μ M)
- 3' primer (100 μ M)
- Sterile H₂O

Volume:

- 7.5 μ l
- 1.5 μ l
- 0.06 μ l
- 0.06 μ l
- up to 15 μ l

Cycling conditions:

Temp	Time	#Cycles
95°C	4min	1
94°C	30s	
62°C	30s	34
72°C	1min	
72°C	7min	1
20°C	5min	1

NB: These PCR conditions have been optimized for high-throughput genotyping. Adaptation to small-scale may be required.

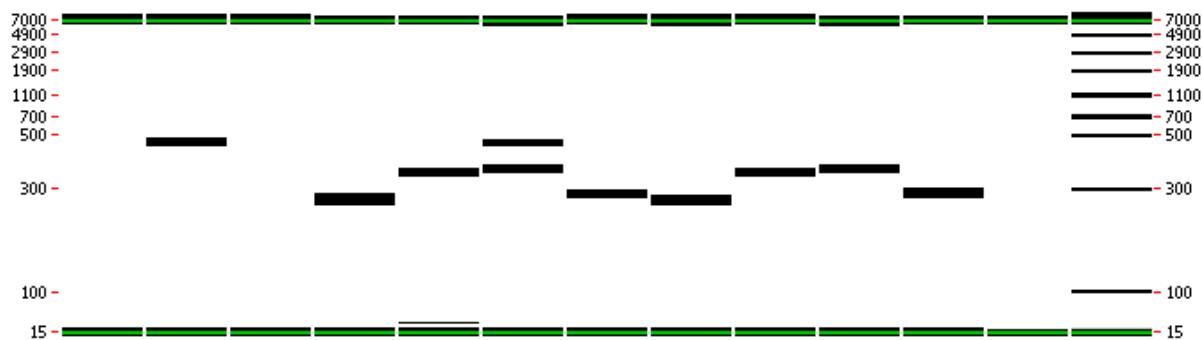

1.3. Picture of genotyping with various alleles

Analysis of PCR products pattern was not done by gel electrophoresis but using LabChip® 90 microfluidic apparatus. PCR products were run on the HT DNA 5K LabChip® 90 Assay Kit.

Representative genotyping picture

5' part of the selection marker	Presence of the distal LoxP	Distal LoxP Specific PCR	Excision of the selection marker	5' part of the selection marker	Presence of the distal LoxP	Distal LoxP Specific PCR	Excision of the selection marker	5' part of the selection marker	Presence of the distal LoxP	Distal LoxP Specific PCR	Excision of the selection marker	Ladder A
---------------------------------	-----------------------------	--------------------------	----------------------------------	---------------------------------	-----------------------------	--------------------------	----------------------------------	---------------------------------	-----------------------------	--------------------------	----------------------------------	----------

WT/WT	L3/WT	L3/L3
-------	-------	-------

Note that as this technology is more sensitive than gel analysis, non specific signals and/or primer dimers may be visible on the picture.

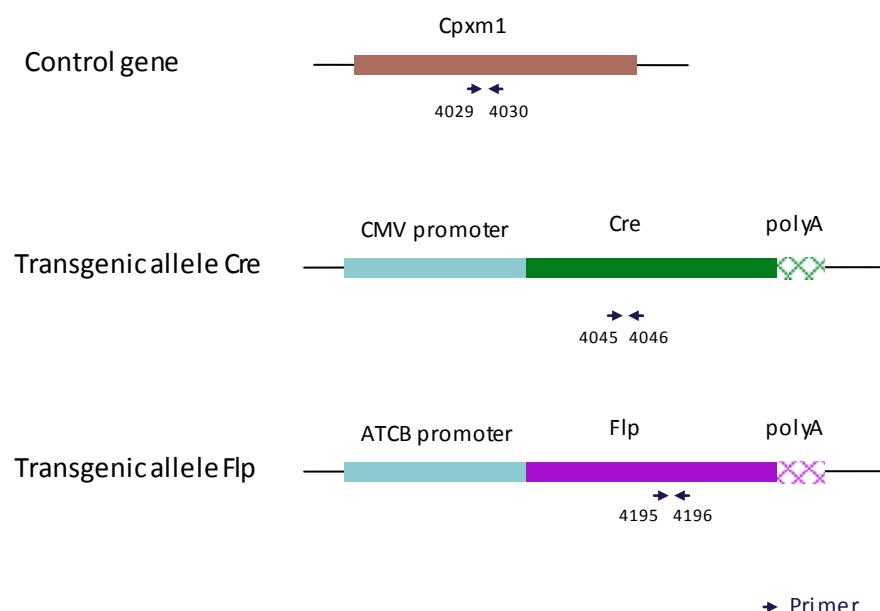

2. Cre and Flp genotyping method

The protocol used to segregate the cre and/or flp transgene is indicated below.

Detection of cre transgene and flp transgene is done using a multiplex assay: primer pairs were designed for each gene and for a positive control (Cpxm1 gene).

2.1. Cre and Flp genotyping

Schematic representation of the genotyping strategy

Sequence of primers used for genotyping:

Primers	Sequence
4029	ACTGGGATCTTCGAACCTTTGGAC
4030	GATGTTGGGGCACTGCTCATTCA
4045	CCATCTGCCACCAGCCAG
4046	TCGCCATCTCCAGCAGG
4195	TCTTAGCGCAAGGGGTAGGATCG
4196	GTCCTGGCACGGCAGAAC

PCR fragments expected size (bp):

Primer pair	4045-4046	4195-4196	4029-4030
Region analyzed	Middle part of Cre transgene	Middle part of Flp transgene	Cpxm1 control gene
Control gene	/	/	446
Tg allele	281	328	/

2.2. PCR Protocol

This section describes the composition of the mix and cycling conditions used for genotyping.

Reagents	Volume
FastStart PCR Master (Roche)	7.5µl
DNA (50ng/µl)	1.5µl
5' primer (100 µM)	0.05µl
3' primer (100 µM)	0.05µl
Sterile H ₂ O	up to 15 µl

Cycling conditions are identical to those described in chapter 1.2
