Gene: Zfp106

Colony prefix: MAKB

ESC clone ID: EPD0033\_4\_C03

WT PCR

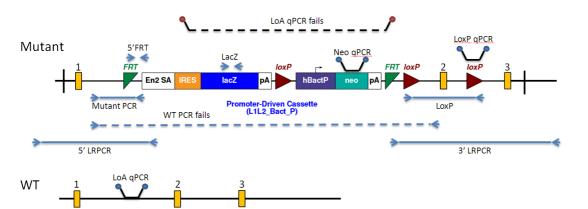

Allele: Zfp106<sup>tm1a(KOMP)Wtsi</sup>

Allele type: Knockout First, Reporter-tagged insertion with conditional potential

## Allele information:

Further information about the allele can be found on the 'International Mouse Phenotyping Consortium' (IMPC) web site at http://www.mousephenotype.org/martsearch\_ikmc\_project/martsearch/ikmc\_project/26348 Details on how to determine the floxed exon can be found at http://www.i-dcc.org/kb/entry/21/

## Southern blot confirmation:

Southern blots are not routinely performed at the Sanger Institute due to throughput constraints. A southern blot experiment design tool can be found on the IMPC web site at http://www.mousephenotype.org/martsearch\_ikmc\_project/martsearch/ikmc\_project/26348

## **Genotyping Information**

#### Genotyping by end-point PCR

These mice may be genotyped through a combination of separate PCR reactions that detect the cassette, the gene-specific wild type allele, and a mutant allele-specific short range PCR. Interpretation of the consolidated results produces the genotype of the mice.

For example: cassette positive, mutant positive, wild type positive = heterozygous.
